Alaa Hybet Zayan

Junior Front-End Developer
Kafr El-Sheikh, Egypt | 01028627251 | alaahybet27@gmail.com | GitHub: github.com/Alaahybet

PROFESSIONAL SUMMARY

Junior Front-End Developer with hands-on experience building responsive web applications using React.js, JavaScript, HTML, and CSS. Experienced in integrating REST APIs, working with React Router and Context API, and managing application state. Built and deployed multiple projects including e-commerce, movie search, weather, and authentication applications. Passionate about learning and building practical web applications while continuously improving front-end development skills.

TECHNICAL SKILLS

Languages: JavaScript, HTML5, CSS3
Framework / Library: React.js
React: React Router, Context API, Hooks
APIs & Data: REST APIs, Fetch API, Local Storage
UI & Responsive Design: Material UI, Responsive Design
Tools & Deployment: Git, GitHub, GitHub Pages

PROJECTS

ShopEasy — E-commerce Web Application

React.js · JavaScript · REST API · React Router

- Built a responsive e-commerce web application using React.js.
- Integrated the DummyJSON REST API to fetch and display product data.
- Implemented product search and category-based filtering.
- Used React state, props, and reusable components to manage and display data.
- Implemented navigation between application pages using React Router.
- Designed responsive layouts for desktop and mobile screens.
- Deployed the application using GitHub Pages.

Live Demo: https://alaahybet.github.io/ShopEasy1/

Movie Search

React.js · TMDB API · React Router · Local Storage

- Built a movie search web application using React.js and the TMDB API.
- Implemented movie search functionality and displayed dynamic search results.
- Created separate pages for movie search, favorites, and movie details.
- Used React Router to handle navigation and dynamic movie detail routes.
- Implemented a favorites system using Local Storage.
- Deployed the application using GitHub Pages.

Live Demo: https://alaahybet.github.io/Movie-search/

Weather Card

React.js · OpenWeather API · Material UI

- Built a weather application using React.js and the OpenWeather API.
- Integrated API requests to retrieve and display real-time weather data.
- Displayed weather information including temperature and weather conditions.
- Used React state to manage API data and application updates.
- Built a responsive interface using Material UI.
- Deployed the application using GitHub Pages.

Live Demo: https://alaahybet.github.io/Weather-Card/

Login & Authentication System

React.js · Context API · Material UI

- Built a login and authentication practice application using React.js.
- Used Context API to manage authentication-related state across the application.
- Implemented a limited login-attempt system with account locking.
- Added a countdown timer for the locked state using React Hooks.
- Implemented proper timer cleanup to prevent unnecessary intervals.
- Built the user interface using Material UI.
- Deployed the application using GitHub Pages.
